

# CIRCULATORS ecocirc® XL

High efficiency large wet rotor pump for heating, cooling and potable water systems

## STANDARD OPERATING MODES

### Constant Speed

 The pump maintains a constant speed at any flow rate. The desired speed is set on the interface panel of the pump.

### Constant Pressure ( $\Delta p-c$ )

 The pump maintains a constant differential pressure at any flow demand until the maximum speed is reached. The desired head of the pump can be set via user interface.

### Proportional Pressure ( $\Delta p-v$ )

 The differential pressure continuously increases or decreases based on the flow demand. The set point head can be set on the pump user interface.

### Night Mode

 The pump will automatically reduce speed when there is an abrupt change in fluid temperature. The change in fluid temperature is from a boiler operating in night time setback mode. The built-in temperature sensor is used.

## CONSTANT TEMPERATURE SPEED CONTROL

### T- Constant Control

This control mode will use a PI algorithm to vary the speed of the pump in order to maintain a constant temperature of the fluid media.

### ΔT-Constant Control

This control mode will use a PI algorithm to vary the speed of the pump in order to maintain a constant differential temperature between the built-in temperature sensor and external temperature sensor.

\* Part numbers represent a Master Carton of 12 flanges with fasteners pack.

1-1/2" is the diameter of the suction and discharge for the 2-bolt models.
